

GPS SPEED ALERT

*Full Featured Speed Alert with
Integrated GPS*

NEIC'S GPS Speed Alert makes driving safely second nature, with a highly visible colour display, easy operation and digital speedo, you will never drift over the speed limit again.

Powerful Performance

The all new GPS Speed Alert has been designed to encourage safer driving still incorporating ease of installation & operation.

The GPS Speed Alert is simply plugged into the cigarette lighter and away you go, it has the preset limit visible at the top of the display at all times and has an easy to see digital readout of your current speed.

On today's roads the speed limits vary from 40km/h to 110km/h and with speed cameras around every corner the GPS Speed Alert will save you money and make your trip safer.

With use of the GPS Speed Signal no wiring to speed sensors or calibration is required, terminated with a standard cigarette lighter plug all you need to do is plug it in.
